

Operation report of Utmost control valve

In the annual demonstration project of 400,000 tons of t. ethylene glycol and 300,000 tons of DMMn circular economy, China Wuhuan Engineering Co., Ltd. provided 217 pneumatic control valves of Utmost fluid control technology (Beijing) Co., Ltd. During the project construction process, Utmost provided various services, from technical support to the valve site commissioning, fully reflects Utmost's professionalism.

Utmost G111 series, G117 series, G118 series and G150 series pneumatic control valve are used. Since the operation of the project, the valve runs stable and the adjustment accuracy fully meets the process conditions, providing reliable guarantee for stable production, pneumatic modular design reduces the inventory of spare parts, eliminates some additional maintenance costs and reduces our operating cost. We evaluate the product quality and good adjustment performance to the pneumatic control valve provided by Utmost Fluid Control Technology Co., Ltd.
